Index	37

Chapter 1

Hierarchical Index

1.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

CommandBase	8
BuildCommand	7
CreateProjectCommand	9
ImportCommand	12
MCreateProjectCommand	16
PathCommand	19
ReadHelpCommand	20
RunCommand	22
UpgradeCommand	25
VersionCommand	26
ManagerCommand	13
NextData	18
StackCommand	23

Chapter 2

Class Index

2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

BuildCommand	
Comado para compilar y enlazar un proyecto de Next	7
CommandBase	
Es la Clase de la que heredantodos los Comandos de Next	8
CreateProjectCommand	
Comando para la creacion de un nuevo Proyecto de Next	9
ImportCommand	
Comado para clonar e importar otro proyecto de Next como una biblioteca	12
ManagerCommand	
Manager que controla la creacion y ejecucion de los comandos	13
MCreateProjectCommand	
Comando para la creacion de un nuevo Proyecto de Next	16
NextData	
Clase que almacena los datos necesarios para el uso de Next por ejemplo 7 La ubicacion en el sistema donde esta instalado Next	18
PathCommand	
Comado que localiza la ruta en la que esta instalado Next	19
ReadHelpCommand	
Comado para leer el archivo de ayuda "help"	20
RunCommand	
COmando para ejecutar el proyecto de Next	22
StackCommand	
Clase que almacena los Comandos a realizar	23
UpgradeCommand	
Comando para actualizar Next	25
VersionCommand	
COmodo para mostrar la version de Next	26

Chapter 3

File Index

3.1 File List

Here is a list of all documented files with brief descriptions:

include/ command_base.hpp	29
include/ manager_command.hpp	34
include/ next_data.hpp	35
include/ stack_command.hpp	36
include/commands/ build_command.hpp	29
include/commands/ create_project_command.hpp	30
include/commands/ import_command.hpp	30
include/commands/ path_command.hpp	31
include/commands/ read_help_command.hpp	32
include/commands/ run_command.hpp	32
include/commands/ upgrade_command.hpp	33
include/commands/ version_command.hpp	34
include/tools/ exec.hpp	36

Chapter 4

Class Documentation

4.1 BuildCommand Class Reference

Comado para compilar y enlazar un proyecto de Next.

```
#include <build_command.hpp>
```

Inheritance diagram for BuildCommand:

Collaboration diagram for BuildCommand:

Public Member Functions

- **BuildCommand ()**
Constructor.
- **~BuildCommand ()**
Destructor.
- **int execute ()**
Metodo de la ejecucion del comando.

4.1.1 Detailed Description

Comado para compilar y enlazar un proyecto de Next.

4.1.2 Constructor & Destructor Documentation

4.1.2.1 BuildCommand()

```
BuildCommand::BuildCommand ( )
```

Constructor.

4.1.2.2 ~BuildCommand()

```
BuildCommand::~~BuildCommand ( )
```

Destructor.

4.1.3 Member Function Documentation

4.1.3.1 execute()

```
int BuildCommand::execute ( ) [virtual]
```

Metodo de la ejecucion del comando.

Returns

int Estatus de ejecución

Implements **CommandBase** (p. 9).

The documentation for this class was generated from the following file:

- include/commands/ **build_command.hpp**

4.2 CommandBase Class Reference

Es la Clase de la que heredan todos los Comandos de Next.

```
#include <command_base.hpp>
```

Inheritance diagram for CommandBase:

Public Member Functions

- **CommandBase** ()
Construsctor vacio de un Comando.
- virtual ~**CommandBase** ()=0
Destructor de Comando.
- virtual int **execute** ()=0
Metodo en donde se realiza la tarea del comando.

4.2.1 Detailed Description

Es la Clase de la que heredan todos los Comandos de Next.

4.2.2 Constructor & Destructor Documentation

4.2.2.1 CommandBase()

```
CommandBase::CommandBase ( )
```

Construsctor vacio de un Comando.

4.2.2.2 ~CommandBase()

```
virtual CommandBase::~~CommandBase ( ) [pure virtual]
```

Destructor de Comando.

4.2.3 Member Function Documentation

4.2.3.1 execute()

```
virtual int CommandBase::execute ( ) [pure virtual]
```

Metodo en donde se realiza la tarea del comando.

Returns

int Estatus de devolucion del comando

Implemented in **MCreateProjectCommand** (p.18), **PathCommand** (p.20), **CreateProjectCommand** (p.11), **BuildCommand** (p.8), **ImportCommand** (p.13), **UpgradeCommand** (p.26), **RunCommand** (p.22), **VersionCommand** (p.27), and **ReadHelpCommand** (p.21).

The documentation for this class was generated from the following file:

- include/ **command_base.hpp**

4.3 CreateProjectCommand Class Reference

Comando para la creacion de un nuevo Proyecto de Next.

```
#include <create_project_command.hpp>
```

Inheritance diagram for CreateProjectCommand:

Collaboration diagram for CreateProjectCommand:

Public Member Functions

- **CreateProjectCommand** ()
Constructor vacio.
- **CreateProjectCommand** (std::string name_project)
Constructor.
- **~CreateProjectCommand** ()
Destructor.
- int **execute** ()
Ejecucion del comando.
- void **createDirs** ()
Crea los directorios.
- void **copyFiles** ()
Copia los archivos.
- void **moveFiles** ()
Mueve los archivos.

4.3.1 Detailed Description

Comando para la creacion de un nuevo Proyecto de Next.

4.3.2 Constructor & Destructor Documentation

4.3.2.1 CreateProjectCommand() [1/2]

```
CreateProjectCommand::CreateProjectCommand ( )
```

Constructor vacio.

4.3.2.2 CreateProjectCommand() [2/2]

```
CreateProjectCommand::CreateProjectCommand (
    std::string name_project )
```

Constructor.

Parameters

<i>name_project</i>	
---------------------	--

4.3.2.3 ~CreateProjectCommand()

```
CreateProjectCommand::~~CreateProjectCommand ( )
```

Destructor.

4.3.3 Member Function Documentation

4.3.3.1 copyFiles()

```
void CreateProjectCommand::copyFiles ( )
```

Copia los archivos.

4.3.3.2 createDirs()

```
void CreateProjectCommand::createDirs ( )
```

Crea los directorios.

4.3.3.3 execute()

```
int CreateProjectCommand::execute ( ) [virtual]
```

Ejecucion del comando.

Returns

int

Implements **CommandBase** (p. 9).

4.3.3.4 moveFiles()

```
void CreateProjectCommand::moveFiles ( )
```

Mueve los archivos.

The documentation for this class was generated from the following file:

- include/commands/ **create_project_command.hpp**

4.4 ImportCommand Class Reference

Comado para clonar e importar otro proyecto de Next como una biblioteca.

```
#include <import_command.hpp>
```

Inheritance diagram for ImportCommand:

Collaboration diagram for ImportCommand:

Public Member Functions

- **ImportCommand** (std::string url_repo)
Constructor.
- **~ImportCommand** ()
Destructor.
- int **execute** ()
Ejecucion del comando.

4.4.1 Detailed Description

Comado para clonar e importar otro proyecto de Next como una biblioteca.

4.4.2 Constructor & Destructor Documentation

4.4.2.1 ImportCommand()

```
ImportCommand::ImportCommand (  
    std::string url_repo )
```

Constructor.

Parameters

<i>url_repo</i>	link del repositorio a clonar
-----------------	-------------------------------

4.4.2.2 ~ImportCommand()

```
ImportCommand::~~ImportCommand ( )
```

Destructor.

4.4.3 Member Function Documentation

4.4.3.1 execute()

```
int ImportCommand::execute ( ) [virtual]
```

Ejecucion del comando.

Returns

int

Implements **CommandBase** (p. 9).

The documentation for this class was generated from the following file:

- include/commands/ **import_command.hpp**

4.5 ManagerCommand Class Reference

Manager que controla la creacion y ejecucion de los comandos.

```
#include <manager_command.hpp>
```

Public Member Functions

- **ManagerCommand** ()
Constructor vacio del Manager.
- **~ManagerCommand** ()
*Destructor de **ManagerCommand** (p. 13).*
- void **execute** ()
Metodo en el que se ejecuta los comandos.
- void **initialize** (int argc, char const *argv[])
Metodo de inicializacion del Manager, aqui se crean los comandos.
- constexpr bool **isFlag** (char const *arg)
Metodo que evalua si un argumento es una bandera.
- void **createFlag** (char const *arg)
Metodo responsable de la creacion de los comandos correspondientes a las Banderas.

4.5.1 Detailed Description

Manager que controla la creacion y ejecucion de los comandos.

Estructura donde se almacenan los comandos a realizar Comandos que se pueden realizar

4.5.2 Constructor & Destructor Documentation

4.5.2.1 ManagerCommand()

```
ManagerCommand::ManagerCommand ( )
```

Constructor vacio del Manager.

4.5.2.2 ~ManagerCommand()

```
ManagerCommand::~~ManagerCommand ( )
```

Destructor de **ManagerCommand** (p. 13).

4.5.3 Member Function Documentation

4.5.3.1 createFlag()

```
void ManagerCommand::createFlag (
    char const * arg ) [inline]
```

Metodo responsable de la creacion de los comandos correspondientes a las Banderas.

Parameters

<i>arg</i>	
------------	--

Here is the call graph for this function:

4.5.3.2 execute()

```
void ManagerCommand::execute ( )
```

Metodo en el que se ejecuta los comandos.

4.5.3.3 initialize()

```
void ManagerCommand::initialize (
    int argc,
    char const * argv[] )
```

Metodo de inicializacion del Manager, aqui se crean los comandos.

Parameters

<i>argc</i>	Numero de argumantos de la linea de comandos
<i>argv</i>	Argumentos de la linea de comandos

4.5.3.4 isFlag()

```
constexpr bool ManagerCommand::isFlag (  
    char const * arg ) [inline], [constexpr]
```

Metodo que evalua si un argumento es una bandera.

Parameters

<i>arg</i>	Argumento a evaluar
------------	---------------------

Returns

true

false

The documentation for this class was generated from the following file:

- include/ **manager_command.hpp**

4.6 MCreateProjectCommand Class Reference

Comando para la creacion de un nuevo Proyecto de Next.

```
#include <create_project_command.hpp>
```

Inheritance diagram for MCreateProjectCommand:

Collaboration diagram for MCreateProjectCommand:

Public Member Functions

- **MCreateProjectCommand** ()
Constructor vacio.
- **MCreateProjectCommand** (std::string name_project)
Constructor.
- **~MCreateProjectCommand** ()
Destructor.
- int **execute** ()
Ejecucion del comando.
- void **createDirs** ()
Crea los directorios.
- void **copyFiles** ()
Copia los archivos.
- void **moveFiles** ()
Mueve los archivos.

4.6.1 Detailed Description

Comando para la creacion de un nuevo Proyecto de Next.

4.6.2 Constructor & Destructor Documentation

4.6.2.1 MCreateProjectCommand() [1/2]

```
MCreateProjectCommand::MCreateProjectCommand ( )
```

Constructor vacio.

4.6.2.2 MCreateProjectCommand() [2/2]

```
MCreateProjectCommand::MCreateProjectCommand (
    std::string name_project )
```

Constructor.

Parameters

<i>name_project</i>	
---------------------	--

4.6.2.3 ~MCreateProjectCommand()

```
MCreateProjectCommand::~~MCreateProjectCommand ( )
```

Destructor.

4.6.3 Member Function Documentation

4.6.3.1 copyFiles()

```
void MCreateProjectCommand::copyFiles ( )
```

Copia los archivos.

4.6.3.2 createDirs()

```
void MCreateProjectCommand::createDirs ( )
```

Crea los directorios.

4.6.3.3 execute()

```
int MCreateProjectCommand::execute ( ) [virtual]
```

Ejecucion del comando.

Returns

int

Implements **CommandBase** (p.9).

4.6.3.4 moveFiles()

```
void MCreateProjectCommand::moveFiles ( )
```

Mueve los archivos.

The documentation for this class was generated from the following file:

- include/commands/ **create_project_command.hpp**

4.7 NextData Class Reference

Clase que almacena los datos necesarios para el uso de Next por ejemplo 7 La ubicacion en el sistema donde esta instalado Next.

```
#include <next_data.hpp>
```

Static Public Member Functions

- static **NextData** * **getInstance** ()

Public Attributes

- std::string **path** = ""

4.7.1 Detailed Description

Clase que almacena los datos necesarios para el uso de Next por ejemplo 7 La ubicacion en el sistema donde esta instalado Next.

The documentation for this class was generated from the following file:

- include/ **next_data.hpp**

4.8 PathCommand Class Reference

Comado que localiza la ruta en la que esta instalado Next.

```
#include <path_command.hpp>
```

Inheritance diagram for PathCommand:

Collaboration diagram for PathCommand:

Public Member Functions

- **PathCommand ()**
Constructor.
- **~PathCommand ()**
Destructor.
- int **execute ()**
Ejecucion del Comando.

4.8.1 Detailed Description

Comado que localiza la ruta en la que esta instalado Next.

4.8.2 Constructor & Destructor Documentation

4.8.2.1 PathCommand()

```
PathCommand::PathCommand ( )
```

Constructor.

4.8.2.2 ~PathCommand()

```
PathCommand::~~PathCommand ( )
```

Destructor.

4.8.3 Member Function Documentation

4.8.3.1 execute()

```
int PathCommand::execute ( ) [virtual]
```

Ejecucion del Comando.

Returns

int

Implements **CommandBase** (p. 9).

The documentation for this class was generated from the following file:

- include/commands/ **path_command.hpp**

4.9 ReadHelpCommand Class Reference

Comado para leer el archivo de ayuda "help".

```
#include <read_help_command.hpp>
```

Inheritance diagram for ReadHelpCommand:

Collaboration diagram for ReadHelpCommand:

Public Member Functions

- **ReadHelpCommand** ()
Constructor.
- **~ReadHelpCommand** ()
Destructor.
- int **execute** ()
Ejecucion del comando.

4.9.1 Detailed Description

Comado para leer el archivo de ayuda "help".

4.9.2 Constructor & Destructor Documentation

4.9.2.1 ReadHelpCommand()

```
ReadHelpCommand::ReadHelpCommand ( )
```

Constructor.

4.9.2.2 ~ReadHelpCommand()

```
ReadHelpCommand::~~ReadHelpCommand ( )
```

Destructor.

4.9.3 Member Function Documentation

4.9.3.1 execute()

```
int ReadHelpCommand::execute ( ) [virtual]
```

Ejecucion del comando.

Returns

int

Implements **CommandBase** (p. 9).

The documentation for this class was generated from the following file:

- include/commands/ **read_help_command.hpp**

4.10 RunCommand Class Reference

COmando para ejecutar el proyecto de Next.

```
#include <run_command.hpp>
```

Inheritance diagram for RunCommand:

Collaboration diagram for RunCommand:

Public Member Functions

- **RunCommand** ()
Constructor.
- **~RunCommand** ()
Destructor.
- int **execute** ()
Ejecucion del comando.

4.10.1 Detailed Description

COmando para ejecutar el proyecto de Next.

4.10.2 Constructor & Destructor Documentation

4.10.2.1 RunCommand()

```
RunCommand::RunCommand ( )
```

Constructor.

4.10.2.2 ~RunCommand()

```
RunCommand::~~RunCommand ( )
```

Destructor.

4.10.3 Member Function Documentation

4.10.3.1 execute()

```
int RunCommand::execute ( ) [virtual]
```

Ejecucion del comando.

Returns

int

Implements **CommandBase** (p. 9).

The documentation for this class was generated from the following file:

- include/commands/ **run_command.hpp**

4.11 StackCommand Class Reference

Clase que almacena los Comandos a realizar.

```
#include <stack_command.hpp>
```

Public Member Functions

- **StackCommand** ()
Constructor vacio.
- **~StackCommand** ()
Destructor.
- void **append** (**CommandBase** *)
Metod para añadir un nuevo Comando.
- void **undo** ()
Metodo para eliminar un comando.
- void **clear** ()
Metodo para borrar todos los comandos.
- void **execute** ()
Metodo para ejecutar los comandos almacenados.

Public Attributes

- std::vector< **CommandBase** * > **stack_tasks**
Vector de los comandos.

4.11.1 Detailed Description

Clase que almacena los Comandos a realizar.

4.11.2 Constructor & Destructor Documentation

4.11.2.1 StackCommand()

```
StackCommand::StackCommand ( )
```

Constructor vacio.

4.11.2.2 ~StackCommand()

```
StackCommand::~~StackCommand ( )
```

Destructor.

4.11.3 Member Function Documentation

4.11.3.1 append()

```
void StackCommand::append (
    CommandBase * )
```

Metod para añadir un nuevo Comando.

Here is the caller graph for this function:

4.11.3.2 clear()

```
void StackCommand::clear ( )
```

Metodo para borrar todos los comandos.

4.11.3.3 execute()

```
void StackCommand::execute ( )
```

Metodo para ejecutar los comandos almacenados.

4.11.3.4 undo()

```
void StackCommand::undo ( )
```

Metodo para eliminar un comando.

4.11.4 Member Data Documentation

4.11.4.1 stack_tasks

```
std::vector< CommandBase *> StackCommand::stack_tasks
```

Vector de los comandos.

The documentation for this class was generated from the following file:

- include/ **stack_command.hpp**

4.12 UpgradeCommand Class Reference

Comando para actualizar Next.

```
#include <upgrade_command.hpp>
```

Inheritance diagram for UpgradeCommand:

Collaboration diagram for UpgradeCommand:

Public Member Functions

- **UpgradeCommand** ()
Constructor.
- **~UpgradeCommand** ()
Destructor.
- int **execute** ()
Ejecucion del comando.

4.12.1 Detailed Description

Comando para actualizar Next.

4.12.2 Constructor & Destructor Documentation

4.12.2.1 UpgradeCommand()

```
UpgradeCommand::UpgradeCommand ( )
```

Constructor.

4.12.2.2 ~UpgradeCommand()

```
UpgradeCommand::~~UpgradeCommand ( )
```

Destructor.

4.12.3 Member Function Documentation

4.12.3.1 execute()

```
int UpgradeCommand::execute ( ) [virtual]
```

Ejecucion del comando.

Returns

int

Implements **CommandBase** (p. 9).

The documentation for this class was generated from the following file:

- include/commands/ **upgrade_command.hpp**

4.13 VersionCommand Class Reference

COMando para mostrar la version de Next.

```
#include <version_command.hpp>
```

Inheritance diagram for VersionCommand:

Collaboration diagram for VersionCommand:

Public Member Functions

- **VersionCommand** ()
Constructor.
- **~VersionCommand** ()
Destructor.
- int **execute** ()
Ejecucion del comando.

4.13.1 Detailed Description

COMado para mostrar la version de Next.

4.13.2 Constructor & Destructor Documentation

4.13.2.1 VersionCommand()

```
VersionCommand::VersionCommand ( )
```

Constructor.

4.13.2.2 ~VersionCommand()

```
VersionCommand::~VersionCommand ( )
```

Destructor.

4.13.3 Member Function Documentation

4.13.3.1 execute()

```
int VersionCommand::execute ( ) [virtual]
```

Ejecucion del comando.

Returns

int

Implements **CommandBase** (p. 9).

The documentation for this class was generated from the following file:

- include/commands/ **version_command.hpp**

Chapter 5

File Documentation

5.1 include/command_base.hpp File Reference

```
#include <string>
#include <vector>
#include <memory>
```

Include dependency graph for command_base.hpp:

5.2 include/commands/build_command.hpp File Reference

```
#include <iostream>
#include <string>
#include <command_base.hpp>
#include <next_data.hpp>
#include <tools/exec.hpp>
```

Include dependency graph for build_command.hpp: This graph shows which files directly or indirectly include this file:

Classes

- class **BuildCommand**
Comado para compilar y enlazar un proyecto de Next.

5.2.1 Detailed Description

5.3 include/commands/create_project_command.hpp File Reference

```
#include <iostream>
#include <string>
#include <command_base.hpp>
#include <next_data.hpp>
#include <tools/exec.hpp>
```

Include dependency graph for create_project_command.hpp: This graph shows which files directly or indirectly include this file:

Classes

- class **CreateProjectCommand**
Comando para la creacion de un nuevo Proyecto de Next.
- class **MCreateProjectCommand**
Comando para la creacion de un nuevo Proyecto de Next.

5.3.1 Detailed Description

5.4 include/commands/import_command.hpp File Reference

```
#include <iostream>
#include <string>
#include <command_base.hpp>
#include <next_data.hpp>
#include <tools/exec.hpp>
```

Include dependency graph for import_command.hpp: This graph shows which files directly or indirectly include this file:

Classes

- class **ImportCommand**
Comado para clonar e importar otro proyecto de Next como una biblioteca.

5.4.1 Detailed Description

5.5 include/commands/path_command.hpp File Reference

```
#include <iostream>
#include <fstream>
#include <string>
#include <vector>
#include <command_base.hpp>
#include <next_data.hpp>
```

Include dependency graph for path_command.hpp: This graph shows which files directly or indirectly include this file:

Classes

- class **PathCommand**

Comando que localiza la ruta en la que esta instalado Next.

5.5.1 Detailed Description

5.6 include/commands/read_help_command.hpp File Reference

```
#include <iostream>
#include <fstream>
#include <string>
#include <command_base.hpp>
#include <next_data.hpp>
```

Include dependency graph for read_help_command.hpp: This graph shows which files directly or indirectly include this file:

Classes

- class **ReadHelpCommand**
Comando para leer el archivo de ayuda "help".

5.6.1 Detailed Description

5.7 include/commands/run_command.hpp File Reference

```
#include <iostream>
#include <string>
#include <command_base.hpp>
#include <next_data.hpp>
#include <tools/exec.hpp>
```

Include dependency graph for run_command.hpp: This graph shows which files directly or indirectly include this file:

Classes

- class **RunCommand**
Comando para ejecutar el proyecto de Next.

5.7.1 Detailed Description

Author

Oswaldo Rafael Zamora Ramirez `rafa.zamora.rals@gmail.com`

Version

5.8 include/commands/upgrade_command.hpp File Reference

```
#include <iostream>
#include <string>
#include <command_base.hpp>
#include <next_data.hpp>
#include <tools/exec.hpp>
```

Include dependency graph for `upgrade_command.hpp`: This graph shows which files directly or indirectly include this file:

Classes

- class **UpgradeCommand**
Comando para actualizar Next.

5.9 include/commands/version_command.hpp File Reference

```
#include <iostream>
#include <fstream>
#include <string>
#include <command_base.hpp>
#include <next_data.hpp>
```

Include dependency graph for version_command.hpp: This graph shows which files directly or indirectly include this file:

Classes

- class **VersionCommand**

COmado para mostrar la version de Next.

5.10 include/manager_command.hpp File Reference

```
#include <string>
#include <stack_command.hpp>
#include <commands/read_help_command.hpp>
#include <commands/version_command.hpp>
#include <commands/path_command.hpp>
#include <commands/create_project_command.hpp>
#include <commands/build_command.hpp>
#include <commands/run_command.hpp>
#include <commands/import_command.hpp>
#include <commands/upgrade_command.hpp>
```

Include dependency graph for manager_command.hpp:

Classes

- class **ManagerCommand**

Manager que controla la creacion y ejecucion de los comandos.

5.10.1 Detailed Description

5.11 include/next_data.hpp File Reference

```
#include <iostream>
```

```
#include <string>
```

Include dependency graph for next_data.hpp: This graph shows which files directly or indirectly include this file:

Classes

- class **NextData**

Clase que almacena los datos necesarios para el uso de Next por ejemplo 7 La ubicacion en el sistema donde esta instalado Next.
